

RecipeGo
w/ AllergyPro
by RecipeGo

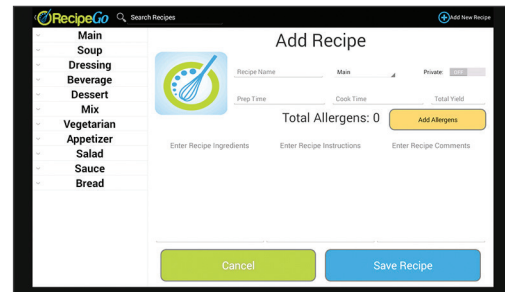

RecipeGo w/ AllergyPro is a new, easy to use, recipe management application, with a fast allergy search function.

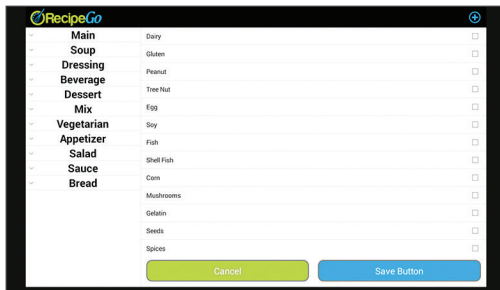

RecipeGo is your personal digital cookbook, which gives you the ability to add recipes on the go. Your staff can print to the Clover printer. Integrated private function prevents others from seeing them. It also quickly searches your recipe database by ingredient, thereby reducing the risk of guests with food allergies eating something they shouldn't.

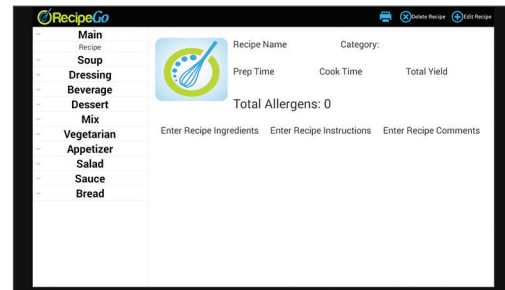

RecipeGo allows the user to quickly find recipes that contain common allergens

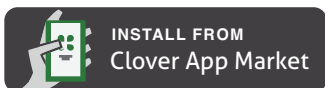

Full recipes can be added easily from your mobile device or tablet, and they can be marked private until you are ready for your staff to see them

It's easy to mark allergens when adding ingredients to your recipes, and they will be highlighted so they can't be missed

Search for and view your recipe on any mobile device or tablet, and quickly see how many allergens are in each one
